

STATE OF COLORADO
OFFICE OF THE STATE ARCHITECT
STATE BUILDINGS PROGRAM

FIVE MOST COSTLY GOODS

INSTRUCTIONS:

This form is to be completed directly after Substantial Completion and returned to the agency/institution with the Pre-Acceptance Form SBP-05.

This following form must be completed for all State Appropriated projects that have a project cost of \$500,000 or more at Project Completion¹. Include the five most costly goods with total cost and country of origin of the goods and any applicable federal domestic content preferences incorporated into the project, including iron, steel, or related manufactured goods. Reference CRS 24-103-910.

A manufactured good is a good brought to the construction site for incorporation into the building or work that has been processed into a specific form and shape; or combined with another raw material to create a material that has different properties than the properties of the individual raw materials.

For example, a crane used to lift items on a construction site would not be considered a covered manufactured good because the crane is not incorporated into the building or public work. Similarly, a desktop computer monitor does not become a permanent fixture of the building and therefore is not "incorporated into" the building.

By contrast, a thermostat that is brought to the site for incorporation into a building would be considered a covered manufactured Good. The individual parts that go into that thermostat, however, would be considered components or subcomponents.

A manufactured good will be considered manufactured in the United States if all of the manufacturing process for the final product take place in the United States irrespective of the origin of the manufactured good's subcomponents.

An iron or steel product will be considered manufactured in the United States if all the manufacturing processes for the final product take place in the United States. The manufactured good is deemed a product manufactured predominantly of steel or iron if the product consists of more than fifty percent steel or iron content when it is delivered to the job site for installation.

¹ Does not apply to projects for Institutions of Higher Education that have opted out of the State Procurement Code unless part of a federal grant program under the Revenue Loss Restoration Cash Fund CRS 24-75-227
